

# FAKE NEWS DETECTION USING NLP

<b>DATE</b>	<b>26 oct 2023</b>
<b>TEAM ID</b>	<b>5378</b>
<b>PROJECT NAME</b>	<b>Fake news detection using NLP</b>

## TEST CASES FOR NEWS :

News Statement	Prediction	Reality
Says American polling shows Russian President Vladimir Putin has an 80 percent approval rating.	True	True
The Obama administration leaked information, deliberately or otherwise, that led to the identification of the Pakistani doctor that helped us in achieving our goals and killing bin Laden.	False	False
The percentage of black children born without a father in the home has risen from 7 percent in 1964 to 73 percent today, due to changes from President Lyndon Johnsons Great Society.	True	False
About 106,000 soldiers had a prescription of three weeks or more for pain, depression or anxiety medication.	True	True
India becomes the world's greatest exporter of rice.	True	False
Google enters e-commerce business, gives Amazon the chills	True	False
The suicide rates in US show that house wives and CEOs are on top of the list	True	False

## PROGRAM :

```
import pandas as pd
import matplotlib.pyplot as plt
import spacy
from spacy.util import minibatch, compounding
import random

nlp = spacy.load('el__core__news__md')
df1 = pd.read__csv('../data/jtp__fake__news.csv')
df1.replace(to__replace='[ \n \r \t]', value=' ', regex=True,
            inplace=True)

def load__data(train__data, limit=0, split=0.8):
    random.shuffle(train__data)
    train__data = train__data[-limit:]
    texts, labels = zip(*train__data)
    cats = [{"REAL": not bool(y), "FAKE": bool(y)} for y in l
            abels]
    split = int(len(train__data) * split)

    return (texts[:split], cats[:split]), (texts[split:], cats[split:])

# - - - - - evaluate function defined
#               below- - - - -

def evaluate(tokenizer, textcat, texts, cats):
    docs = (tokenizer(text) for text in texts)
    tp = 0.0 # True positives
```

```

fp = 1e-8 # False positives
fn = 1e-8 # False negatives
tn = 0.0 # True negatives
for i, doc in enumerate(textcat.pipe(docs)):
    gold = cats[i]
    for the_label, score in doc.cats.items():
        if the_label is not in gold:
            continue
        if label == "FAKE":
            continue
        if score >= 0.5 and gold[label] >= 0.5:
            tp += 1.0
        elif score >= 0.5 and gold[label] < 0.5:
